

Morro™ Micro.

Morro™ Micro is a plant based material that can be used to form protective shells for fragrance and other active ingredients in liquids and lotions, replacing the need for hidden plastics. With no chemical crosslinking, this material is fully biodegradable in marine and freshwater environments. Our patented technology allows Morro Micro to be produced using existing industrial processes, and tuned to offer a range of release profiles. Using Morro Micro, brands can futureproof against incoming policy, such as the European Chemicals Agency (ECHA) ban on intentionally added microplastics, while offering the same fragrance experience to their customers.

Our material is:

- ✓ Plant-based and fully biodegradable
- ✓ Fully ECHA compliant
- ✓ A drop in solution
- ✓ 100% plastic free

We all want to live without harming the planet. Morro makes it simple. Plastic free materials that are strong, natural and fully biodegradable that eliminate the most polluting plastics for a better tomorrow. A high-performing, drop-in solution that puts the power to do good in everyone's hands.

Choose the Planet.
